## EXPERIENCE

**Software Developer (C#/.Net) (M.Sc. Final Year Internship), Bassetti Group** 03/2025 – 08/2025 | Lyon, France

- Developed 4 C#/.NET pipelines for laboratory data integration (CSV/Excel/XML → SQL Server), freeing up to 15% of the application owner's time and improving data reliability.
- Optimized a critical query to run 10x faster by diagnosing an N+1 issue through EF Core SQL log analysis and resolving it with projections and batch processing.
- Built 12 ASP.NET Core REST endpoints across 4 business modules, supporting traceability of laboratory data and operations.
- Wrote 40+ NUnit unit and integration tests covering all 12 API endpoints, business rules, and EF Core persistence.

**Python Teaching Assistant, Université Claude Bernard Lyon 1** 11/2024 – 12/2024 | Lyon, France

- Led weekly Python tutorial sessions for 60 first-year students.
- Provided one-on-one support to struggling students outside scheduled sessions.

## EDUCATION

**Master's Degree in Software Engineering, POLYTECH Lyon** 09/2024 – 09/2025 | Lyon, France

- **Topics:** Web & Mobile Development, Data Engineering, NoSQL, AI, Business Strategy & Management.

**Bachelor's Degree in Computer Engineering** 09/2019 – 07/2024 | Alexandria, Egypt

*Arab Academy for Science, Technology & Maritime Transport*

- **GPA 3.91** – Ranked **5th out of 170** students

## SELECTED PROJECTS

**B.Sc. Graduation Project - Hotel Management Web Application** 09/2023 – 07/2024

*System Design | NodeJs | ReactJs | TypeScript | MySQL | Concurrency Control | Docker*

- Designed the system architecture and MySQL schema for a booking platform with three user roles (guest, receptionist, administrator), in a team of 6.
- Built a Node.js REST API (Controller/Service/Repository) with transactional bookings and concurrency control to prevent double-booking.
- Integrated PayPal payments and secure authentication; developed the React/TypeScript interfaces and containerized the app with Docker.

**Portfolio - Personal Website [Live]**  *Angular | EmailJS | Docker | Vercel* 05/2026 – 06/2026

- Bilingual (EN/FR) Angular site with project filtering, multi-page routing and a contact form, deployed on Vercel.

**SmartMES - Manufacturing Execution System, C# | .NET 10 | Kafka | SignalR | Docker** 05/2026 – Present

- Designed a Manufacturing Execution System backend using Clean Architecture in C#/.NET 10, separating domain, application, infrastructure and API layers for testability and maintainability.
- Implemented event-driven production processing with Kafka (KRaft mode), and pushed real-time alerts to clients through SignalR.
- Modeled production data in SQL Server with EF Core and containerized the full stack with Docker. Source Code 

**Patient Management System** 04/2026 – 05/2026

*Spring Boot | Kafka | gRPC | Microservices | Docker | Api Gateway | AWS infra*

- Built a microservices backend (patient, billing, analytics, auth) behind an API Gateway, with a dedicated auth service for JWT-based authentication and route protection.
- Implemented asynchronous communication with Kafka and synchronous inter-service calls with gRPC/Protobuf, with PostgreSQL per service.
- Containerized the services with multi-stage Docker builds, deployed on AWS, and validated them with integration tests. Source Code 

## SKILLS

**Methodologies & tools:** Agile (Scrum), CI/CD pipelines, Jira, GitLab, Confluence, Unit Testing, Integration Testing, Code Review.

**Programming Languages:** C#, TypeScript, JavaScript, Java, Python, SQL, Bash, Shell (Linux).

**Frontend:** Angular, React, HTML5, CSS3

**Backend:** .NET, ASP.NET Core, Entity Framework Core, NUnit, SpringBoot, NodeJs, Kafka, RabbitMQ, gRPC, Protobuf.

**Databases:** PostgreSQL, MS SQL Server, MongoDB, Redis, Neo4j.

**DevOps & Cloud tools:** AWS, Docker, Linux.

**Languages:** Arabic (Native), English (C1), French (C1)
