PROFESSIONAL EXPERIENCE

IT Project Manager / Software Developer (C#/.NET) (M.Sc. Final Year Internship), Bassetti Group 03/2025 – 08/2025 | Lyon, France

Functional:

- Primary point of contact for international clients (Framatome, Safran, Michelin) for project follow-up and technical coordination
- Gathering and formalizing business requirements, writing functional specifications
- Managing and prioritizing the product backlog, planning and leading sprints (Scrum).
- Tracking deadlines, quality and budget with regular milestone reporting

Technical:

- Database schema design and modeling (PostgreSQL), with a strong focus on data integrity and consistency
- Development of C#/.NET pipelines for business data integration and automation
- REST API design and development (Controller / Service / Repository architecture).
- KPI dashboard design and development (TxBI) for client data analysis and performance tracking
- Implementation of scheduled tasks (cron jobs) for recurring process automation
- Participation in UI/UX interface design and implementation (.aspx)
- Writing unit and integration tests to ensure code quality and reliability
- Containerization and deployment via Docker, version control on GitLab

Python Teaching Assistant, Université Claude Bernard Lyon 1 11/2024 – 12/2024 | Lyon, France

- Taught Python programming language to freshmen.

Fullstack Developer [Node.js/React] (B.Eng. Final-Year Project), AASTMT 09/2023 – 08/2024 | Alexandria, Egypt

Hotel Plaza Website - Systems design | Concurrency control | RESTful API | NodeJs | ReactJs | TypeScript | MySQL | Docker | Git | PayPal.

Full-stack hotel management platform (booking, receptionist and admin dashboards).

- System design and database modeling (MySQL).
- Backend REST API development (Controller/Service/Repository) in Node.js
- Secure PayPal payment integration and enhanced authentication
- Frontend development in ReactJS/TypeScript
- Containerization via Docker, version control on GitHub

EDUCATION

Master's Degree in Software Engineering, POLYTECH Lyon 09/2024 – 09/2025 | Lyon, France

- **Topics:** Web & Mobile Development, Data Engineering, Software Engineering, NoSQL, AI, Business Strategy & Management.
- **Technologies:** Java, C#, Python, Kafka, SQL, PostgreSQL, MongoDB, Oracle, Neo4j, Redis, Postman, Docker, Apache Spark, Hadoop, Talend, Tableau, Power BI, Android Studio, Visual Studio, Tensorflow.

Bachelor's Degree in Computer Engineering 09/2019 – 07/2024 | Alexandria, Egypt

Arab Academy for Science, Technology & Maritime Transport

- **GPA 3.91** – Ranked **5th out of 170** students

SELECTED PROJECTS

Portfolio - Personal Website [Live]  Angular | EmailJS | Docker | Vercel

Modern fullstack Spring boot & Angular portfolio showcasing my full-stack projects, built for performance and clean UX. Features category filtering, smooth CSS animations, multi-page navigation, contact functionality, and English/French language support. Source Code 

SmartMES — Manufacturing Execution System, C# | .NET 10 | Angular | Kafka | SignalR | Docker | Azure

Manufacturing Execution System built with Clean Architecture in C#/.NET 10, designed for real-time production monitoring and control. Features event-driven processing via Kafka (KRaft mode), real-time alerts through SignalR, an Angular dashboard for production tracking, and SQL Server with Entity Framework Core for data persistence. Containerized with Docker and deployed on Azure. Source Code 

Patient Management Service, Spring Boot | Kafka | gRPC | Microservices | Docker | Protobuf | Api Gateway | AWS infra | Integration Testing

Microservices-based patient management backend built with Spring Boot, structured with Controller–Service–Repository architecture. Includes patient, billing, analytics, and auth services behind an API Gateway, using Kafka and gRPC for communication, PostgreSQL for storage, Docker for containerization, and integration tests for reliability. Source Code 

Shipment Tracking System [Live Demo]  Angular | Spring Boot | WebSockets | Tailwind CSS | Docker

Real-time shipment tracking application with create/update features and instant WebSocket notifications. Built with Angular and Spring Boot, deployed on Vercel and Render, following a clean Controller–Service–Repository architecture. Source Code 

Task Manager [Live Demo]  Angular | Vercel | Tailwind CSS | Docker

Simple task management application built with Angular, allowing users to create, organize, and track their tasks. Deployed on Vercel with a clean and responsive UI. Source Code 

SKILLS

Methodologies & tools: Agile (Scrum), CI/CD pipelines, Jira, GitLab, Confluence, Unit Testing, Integration Testing, Code Review, Peer Review.

Programming Languages: Java, C#, Python, JavaScript, TypeScript, SQL, Bash, Shell (Linux), PHP.

Frontend: AngularJS, ReactJS, HTML5, CSS3

Backend: .NET, SpringBoot, NodeJs, Kafka, RabbitMQ, gRPC, Protobuf.

Databases: PostgreSQL, MongoDB, Redis, Neo4j.

DevOps & Cloud tools: AWS, Docker, Linux.

LANGUAGES

Français: C1 | **English:** C1
